JCP Anchor Calculation Program

Developed by our Technical Department, the JCP Anchor Calculation Program has recently been improved to include 3D graphics, along with hole depth optimisation for chemical anchors.

It has the facility to calculate numerous configurations of fixings in different base plate geometry. Calculations are carried out in accordance with the current European Guide EOTA TR 029 for bonded anchors and EOTA ETAG-001 ANNEX C for mechanical anchors.

The software and data base are updated regularly to ensure the program is compliant with any changes in legislation, or industry standards.

The JCP Anchor Calculation Program is free to download via www.jcpfixings.co.uk
